# ROCKINGER: From Trusted Connections to Intelligent Solutions

**For decades, ROCKINGER has been a trusted name in agricultural coupling and linkage solutions. Known for reliability, safety and engineering excellence, the company continues to build on this foundation while investing in the next generation of intelligent agricultural technologies.**

At EIMA 2026, ROCKINGER demonstrates how a long history of developing dependable connections between tractor and implement is evolving into innovative solutions for the future.

One example is the ROCKINGER Intelligent Top Link. Building on decades of expertise in three-point linkage systems, the concept combines proven mechanical know-how with modern digital technology. Through plug-and-play hydraulic integration and ISOBUS connectivity, the Intelligent Top Link is being developed to create new possibilities for improved efficiency, comfort and safety in daily agricultural operations.

The project reflects ROCKINGER's ambition to continue shaping the future of tractor-implement connections while remaining true to the values that have made the brand a trusted partner for generations. Rather than innovation for innovation's sake, the focus remains on developing practical solutions that create value for manufacturers, contractors and farmers alike.

"As agriculture continues to evolve, so do the demands on the connection between tractor and implement. Our goal is to combine the reliability ROCKINGER is known for with new technologies that support more efficient and intelligent operations," said Eero Viikki, Product Manager at ROCKINGER

The Intelligent Top Link is part of ROCKINGER's ongoing development activities and serves as a tangible example of how the company is combining its heritage in mechanical engineering with the opportunities created by digitalisation and smart farming.

With a strong legacy and a clear focus on the future, ROCKINGER continues its journey from trusted mechanical connections to intelligent agricultural solutions.

## About JOST

JOST is a world-leading producer and supplier of safety-critical systems for the commercial vehicle industry. Under the umbrella brand of JOST, the comprehensive range of products is categorised into systems for On-Highway (transport industry) and Off-Highway applications (agriculture and construction industries).

The **JOST brand** includes fifth wheel couplings, landing gears, ball bearing turntables, kingpins, container locks as well as truck and trailer axles. **ROCKINGER** specialises in towing hitches, drawbar eyes and drawbars for transporters and trucks, also serving agricultural vehicles from hitches to three-point linkages. **TRIDEC** provides steering systems and axle suspensions for trailers.

**Quicke** specialises in agricultural front loaders and equipment. This includes products for the mining, construction and forestry machinery industries.

Since 2025 **Hyva** strengthens JOST's portfolio. It is the world's leading producer of front-end tipping cylinders and also offers underbody and double-acting cylinders, lifting systems, and waste handling solutions.

JOST employs over 6,500 people worldwide, with sales and production in more than 35 countries across six continents. It is listed on the Frankfurt Stock Exchange. Learn more at https://www.jost-world.com
