

Wear Limit Gauge 2" Automatic Lubricator

Many people know JOST as a manufacturer of fifth wheels and landing gear winches. Our product programme also includes various accessories which have been perfectly tailored to the requirements of the vehicle and semitrailer engineering sector or workshops:

Wear limit gauge 2"

Check for wear according to the new safety check regulations

The JOST **wear limit gauge** can be an important aid for you: The locking mechanism of JOST fifth wheels is factory-adjusted so that with a new kingpin there is horizontal play of approx 0.3 mm in the direction of travel.

This horizontal play may increase by up to 2 mm when the lock jaw or wearing ring becomes worn. 2" fifth wheels (class G 50) from JOST provide for infinitely variable adjustment to compensate for wear in the locking mechanism. Repair only has to be carried out when the limit of adjustment is exhausted. The JOST wear limit gauge can be used to check when uncoupled whether the locking mechanism of a 2" JOST fifth wheel or a 2" kingpin has reached or exceeded the permissible limit of wear.

Order-No. J 1027

Automatic lubricator

A simple solution to your lubrication problems

The installation of an **automatic lubricator** will save all users of low-maintenance JOST couplings both time and money as it provides lubrication for fifth wheel locking mechanisms for up to six months.

The lubrication cartridge has been tested in long-term trials with **DaimlerChrysler** and released for usage.
