

Press release  
JOST, Neu-Isenburg

## **JSK 42:**

### **Quality, variety and convenience from the market leader.**

*The new 4 series of fifth wheel couplings from the market leader JOST sets standards in the crucial categories of weight, user-friendliness and accessories.*

In a modern fleet every gram counts, and JOST's new fifth wheel couplings can make a real difference. The JSK 42 weighs up to 20% less than its forerunners!

What's more, the JSK 42 is the right fifth wheel coupling whatever your needs. Either a long or normal handle is available, both of which are easy to use with one hand. Of course, the coupling can be supplied with DIN pedestals and mounting plates, or mounted straight onto the frame. You can also opt for a low-maintenance version where only the lock jaw needs to be lubricated.

The JSK 42 is also available with a sensor system to permanently check the locking mechanism, which is ideally complemented by a remote control allowing the driver to open and close the coupling from the cab. The locking status is shown in the driver's cab, constituting an additional safety feature which reliably prevents coupling errors that could have disastrous consequences.
