

New JOST drawbar landing gear to meet all requirements

JOST, the leading manufacturer of connection technology between truck and trailer, has again extended its range of drawbar landing gears. The market leader now offers a comprehensive range of drawbar landing gears for all centre-axle trailers.

Neu-Isenburg, November 2005. -The range includes six variants, from the simple drop leg to the swivel-mounted, 2-speed leg. Pivot bearings and back plates are also available separately. The rigid 2-speed leg lifts up to 10 tonnes, and supports up to 12 tonnes. Even heavier loads can be lifted without any problem, thanks to the two gear transmission ratios. The swivel-mounted drawbar landing gear creates greater clearance from the carriageway, and can each support up to five tonnes.
