# BusLink

The innovative articulation  
pusher bus system –  
a new era of flexibility

# Innovation, experience and perfection

*JOST is a listed corporate group that has been a global leader in the production of safety-related systems, modules and components for commercial vehicles since its foundation in 1952.*

*JOST is characterised by high-quality, reliable and market-oriented products all over the world. With the BusLink articulation pusher bus system, the company is now also offering components for the bus industry for the first time.*

*JOST's BusLink articulation pusher bus system responds to the challenges posed by modern mobility. Welcome to a new era of articulated flexibility.*

- The innovative JOST articulation pusher bus system BusLink optimises the driving stability of an articulated bus with rear-wheel drive.
- Customised complete system according to customer requirements from the articulation to the articulated turntable controller.
- Particularly suitable for the requirements of electric buses.
- Easy installation thanks to JOST patented welded construction with maximum ease of maintenance and service.
- As a world-leading producer and supplier of safety-critical systems for the commercial vehicle industry, JOST transfers decades of experience in welded constructions to the bus industry.

**Ultra-responsive damper cylinder technology for premium driving performance and safety.**

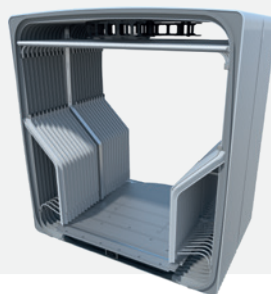

## Articulated turntable controller (ATC)

## JOST bus articulation

## Bellow

### Advantages:

- As a system supplier, JOST offers the perfect integration of all components from a single source.
- The JOST articulated bus system BusLink can be adapted to all possible customer requirements.
- Slim, weight-optimised articulation design particularly suitable for electric bus applications.
- Integrated JOST ball bearing turntable technology, with which the JOST success story began in 1952.
- Decades of experience in welded constructions in the commercial vehicle industry.

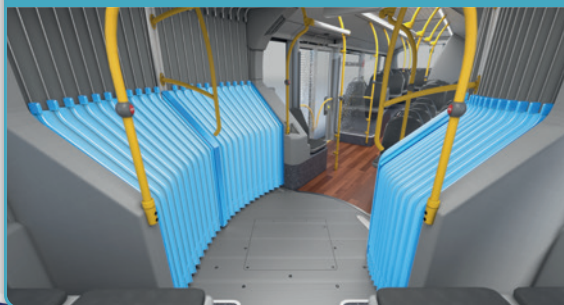

Individually parameterisable articulated turntable controller for best vehicle integration.

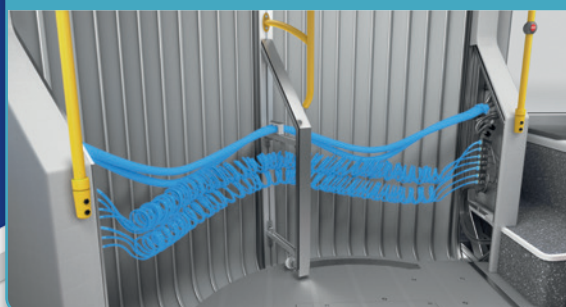

Particularly suitable for the requirements of electric buses.

Increased passenger safety due to the "gap free" solution of the inner bellows.

According to the customer's specifications, the energy guiding system with the cable equipment runs at the top, at the sides or centrally through the articulation.
